

SeaQuest

Prevention of mechanical damage to the distributed water

ADVANTAGES:

- gradual and controlled removal of sediments and corrosion deposits from the water pipeline system,
- improvement of the technical and sanitary condition of the entire water supply network,
- reduction of water losses,
- maintenance of treated water parameters along the whole length of the distribution system,
- no more complaints about the rusty or brown color of the water,
- elimination of the phenomenon of calcium carbonate precipitation (limescale) on kitchen and bathroom fittings.

SeaQuest

THE RESULTS OF SeaQuest USAGE

Preventing secondary contamination of water in the pipeline system.

WATER > 500 mg/L CaCO₃

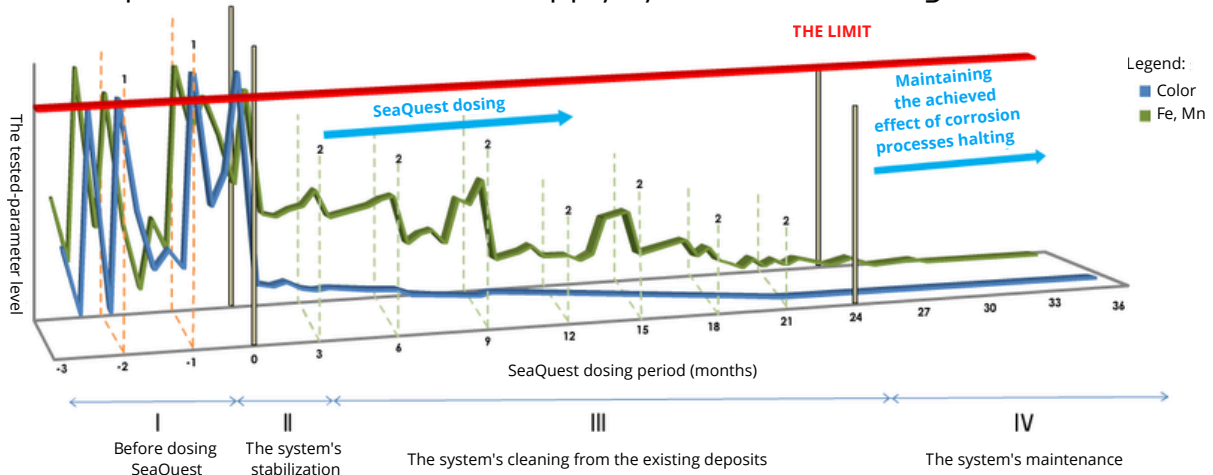

WATER > 500 mg/L CaCO₃ + SeaQuest

Preventing calcium carbonate precipitation (the so-called limescale).

Videos also available at www.prote.pl

Water parameters in the water supply system while dosing SeaQuest

In Poland, we clean approximately 20,000 km of the water supply network

- ▶ without taking it out of service
- ▶ with continuous sale of water
- ▶ parameters in accordance with the Regulation of the Minister of Health
